APOLLO TRAINING CLINIC

SYNTHETIC TRAINING RECORD · NOT FOR CLINICAL USE

Respiratory and cardiac follow-up

Outpatient clinic letter

Patient: Robert Chen

DOB: 1953-06-08

MRN: RC-DEMO-002

Report Date: 2024-06-12

Robert Chen is a 71-year-old man attending review after an admission for worsening breathlessness and ankle swelling. His background includes chronic obstructive pulmonary disease, heart failure with reduced ejection fraction, type 2 diabetes and hypertension. This letter records the problems discussed at review; the medication list and laboratory findings are supplied separately.

Recorded assessment

Diagnosis: Chronic obstructive pulmonary disease (COPD)

Diagnosis: Heart failure with reduced ejection fraction

Diagnosis: No evidence of pneumonia

Clinical context

The record describes a 30-pack-year smoking history, productive cough and reduced exercise tolerance. Spirometry previously showed FEV1 of 42% predicted, and echocardiography recorded an ejection fraction of 38%. Medication reconciliation and review of renal results remain part of the next clinical review.

Recorded next step

Follow-up: Review the medication list and laboratory results at the next clinic visit.
